INSULMAX[®]
WALL INSULATION SYSTEM

The Insulmax® Difference

Ultimate Install Flexibility

Insulmax® is certified to be installed through ALL common exterior claddings and internal wall linings with or without building paper. We can also install in both accessible and inaccessible ceilings.

Energy Efficient

The installation of Insulmax® wall insulation substantially increases the energy efficiency of a property, making it easier and cheaper to heat and a generally warmer, drier, quieter and more pleasant place to live.

Cost Effective

Insulmax® insulation systems insulate without the need to renovate or carry out costly remedial work, with an install hole smaller than a 10 cent coin, making these systems a very cost effective solution to achieve high insulation ratings.

Environmentally Conscious

Insulmax® insulation is made from inert minerals and is composed of 84% post-consumer waste. Insulmax saves tons of building materials from ending up in landfills by eliminating the need to remove wall linings.

CodeMark Certified and Approved by Councils

The Insulmax® Retrofit Wall Insulation Method demonstrates compliance with the NZ Building code via the Codemark Certification scheme and is approved by all councils in NZ. Codemark is the highest level of product assurance in NZ and is administered by MBIE.
